

## Pneumatic Swing Clamp

for adjustable magnetic sensors  
 double acting, max. operating pressure 7 bar

The opposite figure shows a pneumatic swing clamp. Clamping arm and flange are accessories

### Pneumatic swing clamp with accessories

1. Clamping arm (page 3)
2. Magnetic sensor with hose clamp (page 4)
3. Y-cable (see page G 2.140)

### Application

Pneumatic swing clamps are used for applications which require only low clamping forces. The installed magnetic piston allows monitoring of clamping and unclamping position.

### Description

When pressurising the element, the clamping arm swings and lowers by 90° to the clamping position and then lowers to the clamping point. The position monitoring gives the required information regarding the position of the piston, but not regarding the position of the clamping arm. Monitoring is made by electronic sensors (see accessory) which detect the magnetic field of the magnetic piston. The switching points can be continuously adjusted by displacement of the magnetic sensors.

### Special features

When adjusting the clamping screw it has to be considered that for the swing motion a part of the total stroke is required. Make sure that the swing motion can be effected without any interference. When using special clamping arms with other lengths, the corresponding operating pressures as shown in the clamping force diagram must not be exceeded.

### Pneumatic accessories

see data sheet J 7.400

### Installation

On fixtures flange-type swing clamps (flange is an accessory) or threaded versions with corresponding collar nuts can be easily adjusted to different workpiece heights.

### Material

The swing clamps are supplied in corrosion resistant quality. Guide bushing, housing, piston, and flange are made of hardcoated aluminium. The piston rod is made of corrosion resistant steel.

### Important note

Operating of these pneumatic elements has to be effected with an additional service unit in order to guarantee that the clamping elements are supplied with correctly prepared compressed air.

### Connecting example

1877X03	66.5	60	M 10	35	17	3614140

## Accessory Magnetic sensors

Compared with traditional reed switches the electronic magnetic sensors offer the following advantages:

- Indifference to shock and vibration
- Bounce-free output signal
- Only one switching point
- Wear resistant
- Protection against reverse battery
- Protected against short circuits

Electric connection is made as per traditional inductive proximity switches.

Up to four magnetic sensors can be connected in series.

The magnetic sensor is mounted at the swing clamp body with a hose clamp.
